ALEXANDER
IVANOV

Front-End Developer

OBJECTIVE

Conscientious and creative JavaScript programmer curious to master modern web development tech stack. Looking for a position in a software development company that works with international clients. Coming with firm knowledge of common data structures, algorithms and performance analysis, responsive layouts and front-end frameworks. Interested in building fast and beautiful web apps. Looking to improve JS coding quality and style as well as deepen back-end and full stack skills. Interested in product architecture, project management and UI/UX design.

EXPERIENCE

Front-End Developer at Action Engine

July 2020 – present

Developed web-interfaces on JavaScript (Vue, React, jQuery). Implemented Figma UI designs and adjusted them for responsive layouts. Built complex recursive JSON editors with Vuetify and composed algorithms for calculation and visualization of financial data using Chart.js. Integrated a customer support service (FreshDesk) using SSO. Participated in video meetings with US-based clients.

Face Recognition Project

A full stack React + Node.js app that uses Clarifai API for detecting faces on submitted images. Stores user information and processed images in a PostgreSQL database, uses bcrypt for passwords, stores API key and database URL as environmental variables. Uses React Router for navigation. Server and database are deployed to Heroku. This project took second place in MERA's Summer School JavaScript competition.

Github Dashboard

A React SPA that uses GitHub's API to search through repositories and return them sorted by rating.

Maple Season

A Vue SPA website for a band called Maple Season.

Code examples are available at github.com/sanyavanya.

EDUCATION

MERA Summer School

July 2020

UNIX, testing basics, version-control systems, network protocols
2nd place in front-end final project competition

Nizhny Novgorod State University

2011–2014

Faculty of Computational Mathematics and Cybernetics
